

Cosmos Content Library

This page provides information about the Cosmos Content Library.

Overview

The Cosmos Content Library contains over 5000+ high-quality 3D models ready to be applied to 3D visualizations. The growing collection includes samples of furniture, lights, greenery, vehicles, people, HDRIs, and more.

Assets

All Cosmos Assets are organized into four main categories **3D models**, **Materials**, **HDRIs** and **Collections**.

The nine **Spaces** provide fast access to specific 3D models appropriate for **Living Room**, **Kitchen & Dining**, **Bathroom**, **Bedroom**, **Office**, **Restaurant & Cafe**, **Retail**, **Urban** and **Country** styles.

When using Chaos Cosmos, you may find that assets are present in the Chaos Cosmos web service that aren't available in the in-app Cosmos Browser. This is normal and expected because the Chaos Cosmos web service doesn't know which V-Ray and host platform you would like to use and cannot filter the library accordingly. For example, there are some assets that require V-Ray 6 and therefore you won't be able to import them in V-Ray 5.

Chaos recommends using the in-app Cosmos Browser instead of Chaos Cosmos web service. The in-app Cosmos Browser displays only the compatible assets for your host application and V-Ray version, so you can be assured that every single asset will work properly.
