

# Reflection Filter

This page provides information about the Reflection Filter render element in V-Ray for SketchUp.

## Overview

Stores reflection color information based on the reflection color property of a material.

Reflection Filter

Beauty

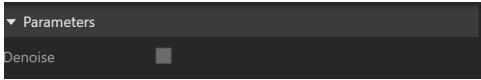

## UI Paths

||V-Ray Asset Editor|| > **Render Elements** (right-click) > **Reflection Filter**

||V-Ray Asset Editor|| > **Create Asset** (left-click) > **Render Elements** > **Reflection Filter**

## Parameters

**Denoise** – Specifies whether to denoise this render element.

## Common Uses

The **Reflection Filter Render Element** is useful for changing the appearance of Reflective elements after rendering, in a compositing or image editing software. In the example, the contrast of the Reflection Filter is increased, which makes reflective objects even more reflective. The [Raw Reflection Render Element](#) is used to colorize the reflections - the floor has a cool tint applied and the ceiling - a warm tint.
